

#### **CommVault**

CommVault is the only software company focused exclusively on data management, and their approach refers to the use of one efficient, scalable data management product to perform a complete range of data management functions. The software uses an expandable range of application modules, sharing a single set of back-end services, to deliver leading-edge functionality that truly unifies and simplifies enterprise data management and maximizes cost effectiveness. This helps control the growth and cost of storage; avoid and reduce capital expenditures; speed backup and recovery; enable easy data archive; maximize the use of your storage devices and networks; gain time and cost-savings efficiencies; avoid the need for additional purchases of devices; maximize tape and disk use; and plan ahead for storage.

#### **Data Domain**

Data Domain systems identify redundant files and data as they are being stored, creating a storage footprint that is up to 20x smaller than the original dataset. Originally an ideal solution for backup and disaster recovery applications, customers are now deploying Data Domain de-duplication storage more broadly as a storage tier including near-line file storage, backup, disaster recovery (DR) and long term retention of enterprise data for reference, litigation support and regulatory compliance. As enterprise data continues to expand exponentially, customers face the costly challenge of storing and managing all that information. Data Domain helps enterprises continue to realize dramatic cost and efficiency improvements; minimize reliance upon tape technology; and meet stringent DR guidelines.

#### **F5**

People rely on business applications delivered by networks, running everything from e-mail to Web pages to customer orders. But as businesses try to do more with their applications, complexity often increases to the point that networks and applications stop working. F5 makes all your applications work using a single, universal platform. This shared product platform provides a highly modular architecture that helps administrators take control of applications and keep them secure, fast, and available. This interface gives extraordinary flexibility and control over applications and devices.

#### **Hewlett-Packard**

HP is a technology solutions provider to consumers, businesses and institutions around the world. HP has an extensive network of dealers and authorized service personnel. HP delivers solutions for consumers, enterprises and small to medium businesses, and explores how technology and services can help people and companies address their problems and challenges, and realize their possibilities, aspirations and dreams. The goal of HP is to create more simple, valuable and trusted experiences with technology, continuously improving the way consumers live and work. From infrastructure and business offerings that span from handheld devices to some of the world's most powerful supercomputer installations, HP offers consumers a wide range of products and services in a comprehensive portfolio that helps to match the right products, services and solutions to a customers' specific needs. No other company offers as complete a technology product portfolio as HP.

#### **Intel**

Intel pushes the boundaries of innovation so our work can make people's lives more exciting, fulfilling, and manageable. And our work never stops. We never stop looking for the next leap ahead—in technology, education, culture, manufacturing, and social responsibility. And we never stop collectively delivering better solutions with greater benefits for everyone.

#### **LeftHand Networks**

LeftHand Networks delivers physical and virtual storage area networks that are easy-to-grow, easy-to-manage and designed to perform optimally in today's global data centers. LeftHand Networks pioneered IP-based SANs

## EPIC Technology Day Vendor Profiles Saskatoon, April 10<sup>th</sup>, 2008

in 2001, with innovative scalable SAN solutions built for businesses of every size. Ideal for storage and server consolidation, multi-site SANs and disaster recovery, LeftHand's SAN/iQ software is specifically designed to distribute and protect customer data by leveraging a cluster of industry-standard storage nodes. The patented architecture increases data availability and allows users to start small and grow their SAN seamlessly, simplifying management.

### **Novell**

Novell delivers infrastructure software for the Open Enterprise. Novell is a leader in desktop to data center operating systems based on Linux and the software required to secure and manage mixed IT environments. Novell helps customers around the world minimize cost, complexity and risk, allowing them to focus on innovation and growth.

### **Progress Software**

Progress Software Corporation provides application infrastructure software for the development, deployment, integration and management of business applications. Our goal is to maximize the benefits of information technology while minimizing its complexity and total cost of ownership. Today the company has over 1,600 employees in over 90 countries. Progress is headquartered in Massachusetts, USA, and is a worldwide leader in application infrastructure software.

### **RIM**

Research In Motion is a leading designer, manufacturer and marketer of innovative wireless solutions for the worldwide mobile communications market. Through the development of integrated hardware, software and services that support multiple wireless network standards, RIM provides platforms and solutions for seamless access to time-sensitive information including email, phone, text messaging, Internet and intranet-based applications. RIM technology also enables a broad array of third party developers and manufacturers to enhance their products and services with wireless connectivity to data.

### **Symantec**

Symantec is a global leader in infrastructure software, enabling businesses and consumers to have confidence in a connected world. The company helps customers protect their infrastructure, information and interactions by delivering software and services that address risks to security, availability, compliance and performance.

### **Touchpaper**

Touchpaper is a leading global provider of IT Business Management solutions, delivering measurable value for IT and customer services. With over 20 years of experience, Touchpaper is one of the most established and respected international providers of IT Business Management solutions, encompassing IT Service Management, Customer Service Solutions and Network and Systems Management. Touchpaper has over 1,800 customers around the world and is the IT Service Management provider recommended by Novell worldwide with integration to Novell ZENworks, GroupWise and Identity Security Management.

### **ViewSonic**

ViewSonic Corporation is a leading global provider of visual display products. ViewSonic develops, markets and supports a broad range of innovative products including LCD monitors, LCD TVs, projectors, digital signage displays and other display products.

### **Vizioncore**

Vizioncore provides software that helps organizations safeguard and optimize their virtualized environments and allows them to extract the maximum return on their investment in the VMware platform. Vizioncore's software products support essential IT strategies, including business continuity, high availability and disaster
